

FUEL RANK POTENTIAL FIRE BEHAVIOR

- Very High Moderate
High Non-wildland Fuel

CDF has developed a fuels assessment methodology for the California Fire Plan to identify and prioritize pre-fire projects designed to minimize the costs and losses from wildfire. The fuel ranking methodology assigns rank based on expected fire behavior for unique combinations of topography and vegetative fuels under a given severe weather condition (wind speed, humidity, and temperature). The fuel ranking procedure makes an initial assessment based on an assigned fuel model (see FRAP map Surface Fuels) and slope, then raises rank based on the amount of ladder and/or crown fuel present to arrive at a final rank. For a detailed description of the data and methods please visit http://frap.cdf.ca.gov/data/fire_data/fuel_rank/index.html.
